

FloJak is easy to operate.

FloJak is a hand operated well-pump kit-in-a-box, capable of lifting well water up to 150 feet, delivering up to 10 GPM. The design is narrow and fits into almost any well, right beside the existing submersible pump. FloJak attaches to the top of the well casing with a heavy duty steel hanger-bracket, and is then covered with our canvas well bonnet (included). This system uses custom made, high-resin, PVC pipe in 5 foot lengths so that the shipping carton is small and transportable, and so that the pump can be assembled in 5 foot increments. FloJak is engineered to assemble in less than an hour. Select a pump kit long enough to extend 20 feet below the static water level in your well. If you need a longer system, you may order additional 50 foot pipe kits (E-50).

FloJak manufactures work-reducing Lift Kits for our pumps that bolt right on to the hanging bracket. This is particularly essential if you plan to pump pressurized water into your home using a high pressure water hose (GatorHyde GH-50) connected to any two-way outdoor faucet. This is a convenience that can provide water for flushing or at the kitchen sink.

You may also wish to opt for a Removable Stainless Steel Handle (SPH-10) for added durability and security. The shelf life is 25 years, and FloJak comes with a 2 year manufacturer's warranty. Every "below the water level" component is made from stainless steel or food grade polymers. FloJak is proudly Made in America, by Americans.

Pump & Pipe Kits
